**Celebration EHCP TARGET progression mapping**

**Place Value Strand Overview**

The place value strand focuses on developing pupils' understanding of how numbers are structured and represented in our number system. It builds on earlier counting and composition skills by introducing the idea that numbers are made up of tens, ones (and later hundreds), and that the value of a digit depends on its position. Pupils learn to represent, partition, compare and use numbers flexibly, supporting calculation and problem solving across mathematics.

**Why is it important?**

Place value is what allows pupils to work with larger numbers efficiently. It underpins addition and subtraction, multiplication and division, and estimation and number sense.

Without this: pupils treat numbers as single units and struggle to calculate or reason

With it: pupils understand number structure and can manipulate numbers flexibly

**Pathway Aim –**

By the end of the pathway, pupils will be able to understand the structure of numbers using place value and apply this knowledge to represent, compare and solve problems with increasingly large numbers.

**Example evidence statements –**

"The pupil can represent a number using tens and ones."
"They can partition numbers into tens and ones and explain their thinking."
"They can compare two-digit numbers and say which is greater and why."
"They use place value knowledge to support calculation."

| | | |
|---|---|---|
| **Early Place Value Awareness**<br>**(Band 8)**<br>Pupils begin to represent numbers using objects, pictures and number lines, and develop early understanding of numbers beyond 10 as composed of "10 and some more." | **Understanding Tens & Ones**<br>**(Band 9)**<br>Pupils understand that two-digit numbers are made up of tens and ones. They can partition numbers and use this to represent, compare and work with numbers more effectively. | **Extended Place Value Understanding**<br>**(Band 10)**<br>Pupils extend their understanding of place value to three-digit numbers, including hundreds, tens and ones. They use this knowledge to represent, compare and solve problems with larger numbers. |

|---|---|---|
| **Key stage Target**<br>By the end of the key stage, the pupil will represent and explore numbers using objects, pictures and number lines, including understanding teen numbers as 10 and some more. | **Key stage Target**<br>By the end of the key stage, the pupil will understand that two-digit numbers are composed of tens and ones and use this to represent and compare numbers. | **Key stage Target**<br>By the end of the key stage, the pupil will understand and use place value (hundreds, tens and ones) to represent, compare and solve problems with larger numbers. |
| **Typical evidence might include:**<br>• building numbers using objects<br>• using number lines<br>• identifying teen numbers<br>• comparing small numbers practically | **Typical evidence might include:**<br>• partitioning numbers into tens and ones<br>• representing numbers using base 10 or objects<br>• comparing two-digit numbers<br>• using <, >, = | **Typical evidence might include:**<br>• partitioning into hundreds, tens and ones<br>• comparing numbers to 1000<br>• representing numbers in different ways<br>• solving problems using place value |
| **Mapped curriculum targets**<br>**Band 8**<br>I can understand teen numbers as 10 and some more<br>I can represent numbers using objects, pictures and number lines<br>I can compare quantities within 10<br>I can order numbers within 20 | **Mapped curriculum targets**<br>**Band 9**<br>I can recognise place value of digits in two-digit numbers<br>I can read and write numbers to 100<br>I can represent numbers using objects, pictures and number lines<br>I can estimate on a number line<br>I can compare and order numbers using <, > and =<br>I can use place value to solve problems<br>I can partition two-digit numbers into tens and ones | **Mapped curriculum targets**<br>**Band 10**<br>I can recognise place value of digits in three-digit numbers<br>I can read and write numbers to 1000<br>I can represent numbers in different ways including number lines<br>I can compare and order numbers to 1000<br>I can use place value to solve problems<br>I can partition numbers into hundreds, tens and ones |
| **Next Step:** Develop understanding of tens and ones within two-digit numbers (Understanding Tens & Ones) | **Next Step:** Apply place value understanding to larger numbers (hundreds, tens and ones) | **Next Step:** Apply place value understanding to support efficient calculation, estimation and problem solving across all areas of mathematics |
