Celebration EHCP TARGET progression mapping

Addition and Subtraction Strand Overview

The addition and subtraction strand focuses on developing pupils' ability to combine and separate quantities using increasingly efficient and abstract methods. It builds on earlier composition and counting skills by moving from practical and pictorial representations to mental and written calculations. Pupils learn to apply addition and subtraction strategies flexibly, use mathematical symbols, and solve problems in a range of contexts.

Why is it important?

Addition and subtraction are fundamental operations that underpin all areas of mathematics.

They rely on, counting, cardinality, composition (part–whole understanding), place value.

Without this - pupils rely on counting strategies and struggle with efficiency and problem solving.

With it - pupils calculate fluently, choose appropriate strategies and apply knowledge across contexts.

Pathway Aim –

By the end of the pathway, pupils will be able to solve addition and subtraction problems using a range of strategies, representations and methods, and apply these skills to real-life and mathematical contexts.

Example evidence statements –

"The pupil can use objects or pictures to solve addition and subtraction problems within 10."
"They can use number lines and symbols to represent calculations."
"They recall addition and subtraction facts and use them to solve problems."
"They choose appropriate strategies and explain their working."

Concrete Addition & Subtraction **(Band 8)** Pupils use objects, pictures and practical resources to represent and solve addition and subtraction problems within small numbers.	**Developing Fluency & Recall** **(Band 9)** Pupils develop fluency in addition and subtraction by recalling number facts and applying strategies to solve problems, including with two-digit numbers.	**Efficient Calculation & Problem Solving** **(Band 10)** Pupils use mental and formal written methods to solve increasingly complex addition and subtraction problems, including multi-step problems, and apply reasoning to check and refine their answers.

Celebration EHCP TARGET progression mapping

Key stage Target By the end of the key stage, the pupil will solve addition and subtraction problems using concrete and pictorial representations.	**Key stage Target** By the end of the key stage, the pupil will recall and use addition and subtraction facts and apply them to solve problems involving numbers within and beyond 20.	**Key stage Target** By the end of the key stage, the pupil will use mental and written methods to solve addition and subtraction problems accurately and efficiently, including multi-step problems.
Typical evidence might include: • using objects to combine and separate groups • using pictures or drawings to represent calculations • beginning to use symbols (+, −, =) • solving one-step problems	**Typical evidence might include:** • recalling number facts to 20 • solving problems using objects and pictorial methods • adding and subtracting two-digit numbers • using number lines and inverse operations	**Typical evidence might include:** • using formal written methods • solving multi-step problems • estimating and checking answers • explaining methods and reasoning
Mapped curriculum targets **Band 8** • I can add and subtract within 10 • I can use objects and number lines • I can use +, − and = symbols • I can represent addition and subtraction using pictures	**Mapped curriculum targets** **Band 9** • I can solve problems using objects and pictorial representations • I can recall addition and subtraction facts to 20 • I can add and subtract two-digit numbers (with ones and tens) • I can use number lines • I can use inverse operations to check answers • I can solve missing number problems	**Mapped curriculum targets** **Band 10** • I can add and subtract three-digit numbers mentally • I can use formal written methods • I can estimate answers • I can use inverse operations • I can solve multi-step problems
Next Step: Develop recall of number facts and use more efficient strategies for solving problems	**Next Step:** Apply efficient mental and written methods to solve more complex calculations	**Next Step:** Apply addition and subtraction fluently and efficiently to support problem solving across all areas of mathematics, including multiplication, division, fractions and algebraic thinking
