**Celebration EHCP TARGET progression mapping**

**Fractions Strand Overview**

The fractions strand focuses on developing pupils' understanding of parts and wholes. It builds on earlier composition and multiplication skills by introducing equal sharing, recognising simple fractions, and understanding how quantities can be divided into equal parts. Pupils learn to represent, find and compare fractions, and apply this understanding to solve problems in a range of mathematical contexts.

**Why is it important?**

Fractions develop understanding of parts of a whole and relationships within numbers

They rely on composition (part–whole understanding), and multiplication and division (equal groups and sharing).

Without this - pupils struggle to understand proportions, sharing and relationships between quantities

With it - pupils understand how numbers can be divided, compared and related in more complex ways

**Pathway Aim –**

By the end of the pathway, pupils will be able to understand, represent and use fractions to describe parts of quantities and solve problems involving equal sharing and proportional relationships.

**Example evidence statements –**

"The pupil can share objects into equal groups and explain what they have done."
"They can identify and represent halves and quarters."
"They can find simple fractions of quantities."
"They can compare fractions and recognise simple equivalence."

| | | |
|---|---|---|
| **Equal Sharing & Early Fractions (Band 8)**<br>Pupils develop understanding of fractions through practical experiences of sharing and grouping. They recognise and create equal groups and begin to identify simple fractions such as halves and quarters. | **Fractions of Quantities & Representation (Band 9)**<br>Pupils recognise, represent and find fractions of quantities. They begin to use fraction notation and represent fractions using drawings and objects. | **Fraction Relationships & Problem Solving (Band 10)**<br>Pupils develop a deeper understanding of fractions by recognising equivalence, comparing fractions and solving problems. They extend their understanding to include tenths and more formal fraction operations. |

|---|---|---|
| **Key stage Target**<br>By the end of the key stage, the pupil will share objects into equal groups and recognise simple fractions such as halves and quarters in practical contexts. | **Key stage Target**<br>By the end of the key stage, the pupil will recognise, represent and find simple fractions of quantities using practical resources and visual representations. | **Key stage Target**<br>By the end of the key stage, the pupil will understand and use fraction equivalence and comparison and solve problems involving fractions. |
| **Typical evidence might include:**<br>• sharing objects equally between groups<br>• identifying equal vs unequal groups<br>• recognising halves and quarters in real contexts<br>• explaining what "equal" means | **Typical evidence might include:**<br>• finding 1/2 or 1/4 of a quantity<br>• using drawings to represent fractions<br>• writing simple fraction notation<br>• solving problems involving fractions | **Typical evidence might include:**<br>• recognising equivalent fractions (e.g. 2/4 = 1/2)<br>• comparing fractions<br>• solving problems involving tenths<br>• adding and subtracting fractions with the same denominator |
| **Mapped curriculum targets**<br>**Band 8**<br>• I can recognise and find halves and quarters<br>• I can share equally<br>• I can explain equal parts<br>• I can identify equal and unequal groups | **Mapped curriculum targets**<br>**Band 9**<br>• I can recognise, find and name halves and quarters<br>• I can write simple fractions (e.g. 1/2 of 6 = 3)<br>• I can represent fractions using drawings<br>• I can solve problems involving fractions<br>• I can find fractions of quantities using objects | **Mapped curriculum targets**<br>**Band 10**<br>• I can count in tenths<br>• I can recognise tenths as dividing into 10 equal parts<br>• I can recognise, find and write fractions<br>• I can recognise equivalent fractions<br>• I can compare and order fractions<br>• I can solve problems involving fractions<br>• I can add and subtract fractions with the same denominator |
| **Next Step:** Represent and find fractions of quantities using objects and drawings (Fractions of Quantities) | **Next Step:** Understand relationships between fractions, including equivalence and comparison | **Next Step:** Apply understanding of fractions to support proportional reasoning, scaling, measurement and more complex problem solving |
