Celebration EHCP TARGET progression mapping

Multiplication and Division Strand Overview

The multiplication and division strand focuses on developing pupils' understanding of grouping, sharing and scaling quantities. It builds on earlier composition and counting skills by introducing equal groups, repeated addition and arrays, before progressing to recalling key number facts and solving problems. Pupils learn to represent multiplication and division in different ways and apply this understanding across a range of mathematical contexts.

Why is it important?

Multiplication and division allow pupils to work efficiently with larger quantities.

They rely on counting (repeated counting, grouping), composition (understanding number as groups and parts), and place value.

Without this - pupils rely on repeated counting and struggle with efficiency

With it - pupils recognise patterns, use known facts and solve problems more efficiently

Pathway Aim –

By the end of the pathway, pupils will be able to understand multiplication and division as grouping and sharing, and use strategies, representations and number facts to solve problems in a range of contexts.

Example evidence statements –

"The pupil can make equal groups using objects and explain what they have done."
"They can use arrays to represent multiplication."
"They recall multiplication facts and apply them to solve problems."
"They can explain how multiplication and division are related."

Grouping & Sharing **(Band 8)** Pupils develop understanding of multiplication and division through practical experiences of grouping and sharing. They make equal groups and explore division as sharing into equal parts.	**Repeated Addition & Arrays** **(Band 9)** Pupils represent multiplication using arrays and repeated addition, and begin to understand the relationship between multiplication and division. They use these strategies to solve problems.	**Fluency & Problem Solving** **(Band 10)** Pupils develop fluency in multiplication and division through recalling a wider range of facts and applying efficient strategies. They solve increasingly complex problems, including scaling and correspondence problems.

Celebration EHCP TARGET progression mapping

Key stage Target By the end of the key stage, the pupil will understand multiplication and division as grouping and sharing through practical activities.	**Key stage Target** By the end of the key stage, the pupil will represent multiplication and division using arrays and repeated addition and use this to solve problems.	**Key stage Target** By the end of the key stage, the pupil will recall and apply multiplication and division facts and use them to solve increasingly complex problems.
Typical evidence might include: • making equal groups with objects • sharing objects equally between groups • recognising equal and unequal groups • solving one-step problems through grouping	**Typical evidence might include:** • building and interpreting arrays • using repeated addition to solve multiplication problems • recognising commutativity (e.g. 3 × 4 = 4 × 3) • solving problems in context	**Typical evidence might include:** • recalling multiplication facts (e.g. 3, 4, 8 times tables) • solving scaling problems • applying known facts to calculations • solving multi-step problems
Mapped curriculum targets **Band 8** I can solve one-step problems using grouping I can use arrays I can represent multiplication and division I can make equal groups	**Mapped curriculum targets** **Band 9** I can recall multiplication and division facts for 2, 5 and 10 I can calculate using ×, ÷ and = I can use arrays and repeated addition I can explain commutativity of multiplication I can solve problems in context I can recognise odd and even numbers	**Mapped curriculum targets** **Band 10** I can recall multiplication facts including 3, 4 and 8 I can calculate using known facts I can multiply two-digit numbers by one digit I can solve scaling and correspondence problems I can solve missing number problems
Next Step: Represent multiplication using arrays and repeated addition (Repeated Addition & Arrays)	**Next Step:** Recall and apply multiplication and division facts to solve more complex problems efficiently	**Next Step:** Apply multiplication and division fluently to support problem solving across mathematics, including fractions, ratio and proportional reasoning
