Achievement EHCP TARGET progression mapping

Measures Strand Overview

The measures strand focuses on developing pupils' understanding of size, quantity, time and other measurable attributes within their environment. It begins with sensory exploration of differences (e.g. big/small, full/empty), progressing towards comparing, ordering and measuring using both informal and standard approaches. Pupils develop the ability to interpret and solve practical problems involving measurement in meaningful contexts.

Why is it important?

Supports real-life problem solving, understanding of quantity, and independence in everyday tasks.

Without this - pupils may struggle to compare, estimate or measure in real-life situations

With it **-** pupils can interpret, compare and use measurement meaningfully in everyday contexts

Pathway Aim

By the end of the pathway, pupils will be able to compare, measure and solve practical problems involving size, time, weight and capacity in a range of contexts.

Example Evidence Statements

"The pupil solves practical problems involving capacity or size."

"They compare measurements and explain their reasoning."

"They use measuring tools consistently across different activities."

Experiential Measures Awareness (Bands 1–3) Pupils explore measurable properties through sensory experience, developing awareness of differences such as size, weight, capacity and time.	**Comparing & Ordering Measures (Bands 4–5)** Pupils compare and order objects based on measurable attributes and begin to use appropriate vocabulary.	**Measuring & Estimation (Band 6)** Pupils measure objects using non-standard units and begin to compare and estimate measurements.	**Applying Measures in Problem Solving (Band 7)** Pupils apply measurement skills to solve practical problems, compare results and begin to reason about measurements.

Achievement EHCP TARGET progression mapping

Key stage Target By the end of the key stage, the pupil will demonstrate awareness of measurable differences through exploration and sensory experiences.	**Key stage Target** By the end of the key stage, the pupil will compare and order objects using measurable attributes and begin to use related vocabulary.	**Key stage Target** By the end of the key stage, the pupil will measure and compare objects using informal methods and begin to apply this to solve problems.	**Key stage Target** By the end of the key stage, the pupil will use measurement to solve practical problems and compare results in meaningful contexts.
Typical evidence might include: reacting differently to large/small objects filling and emptying containers during play exploring heavy/light through handling objects responding to familiar routines	**Typical evidence might include:** ordering objects by size comparing two items using language sequencing events or routines responding to terms like “bigger”, “heavier”	**Typical evidence might include:** measuring using cubes, hands or informal units using simple tools like rulers or scales comparing time durations estimating and checking	**Typical evidence might include:** solving real-life problems (e.g. which holds more) comparing measured results using tools consistently applying knowledge across contexts
Mapped curriculum targets **Band 1** Respond to big/small items **Band 2** Explore different sizes Empty containers Show awareness of routines **Band 3** Explore size and weight Fill and empty containers Begin to understand now/later	**Mapped curriculum targets** **Band 4** Respond to differences in size, weight, length and capacity Order items by size Understand time language (before, next, later) **Band 5** Compare two items (longer/shorter, heavier/lighter) Sequence events	**Mapped curriculum targets** **Band 6** Use measuring tools (e.g. rulers, scales) Measure using non-standard units Compare durations Sequence events	**Mapped curriculum targets** **Band 7** Use measuring tools consistently Solve practical problems involving measure Compare measurements Sequence events accurately
Next Step: Begin to compare measurable attributes (e.g. bigger, smaller, heavier)	**Next Step:** Begin to measure using informal and non-standard methods	**Next Step:** Use measurement to solve practical problems	**Next Step:** Measure, calculate and solve problems using standard units and more formal methods (Celebration)
