**Achievement EHCP TARGET progression mapping**

**Spatial awareness Strand Overview**

The spatial awareness strand focuses on developing pupils' understanding of position, movement and relationships between objects and space. It begins with early physical exploration of the body and environment and progresses towards describing, visualising and reasoning about space using mathematical language.

**Why is it important?**

Spatial awareness supports movement and independence, problem solving, and geometry and reasoning.

Without this - pupils may struggle to navigate, position objects or understand directions

With it - pupils can visualise, describe and manipulate space effectively

**Pathway Aim**

By the end of the pathway, pupils will be able to understand, describe and reason about position, direction and movement in a range of contexts.

**Example Evidence Statements**

"The pupil can describe how an object looks when turned or viewed from another angle."

"They predict what will happen when objects are rotated or moved."

"They use positional language relative to perspective (e.g. 'behind', 'in front')."

| **Experiential Spatial Awareness (Bands 1–3)** | **Positional Awareness & Language (Bands 4–5)** | **Spatial Reasoning & Navigation (Band 6)** | **Visualisation & Perspective (Band 7)** |
|---|---|---|---|
| Pupils explore space through movement and sensory experience, developing awareness of their body and surroundings. | Pupils begin to understand and use positional language and solve simple problems involving movement and space. | Pupils use spatial language independently, follow directions and describe positions accurately in different contexts. | Pupils understand how objects and images change when moved or viewed differently and use spatial reasoning to explain this. |
| **Key stage Target**<br>By the end of the key stage, the pupil will demonstrate awareness of space and position through | **Key stage Target**<br>By the end of the key stage, the pupil will understand and use | **Key stage Target**<br>By the end of the key stage, the pupil will use spatial language to | **Key stage Target**<br>By the end of the key stage, the pupil will understand and describe how objects move and appear |
