Celebration EHCP TARGET progression mapping

Measures Strand Overview

The measures strand at Celebration level focuses on applying understanding of measurement in increasingly accurate and formal ways. Pupils use standard units, tools and methods to measure, compare and calculate, and apply this understanding to solve practical problems involving length, mass, capacity, time and money. They develop the ability to interpret measurements and use them meaningfully in real-life contexts.

Why is it important?

Supports real-life problem solving, independence, and understanding of quantity across contexts.
Without this – pupils may struggle to measure accurately, interpret results or apply measurement in everyday situations.
With it – pupils can measure, compare and solve problems using appropriate tools, units and strategies in real-life contexts.

Pathway Aim –

By the end of the pathway, pupils will be able to measure, compare and solve problems using standard units and apply this understanding across a range of mathematical and real-life contexts.

Example evidence statements –

"The pupil measures objects using standard units and records their findings accurately."
"They compare measurements and explain their reasoning using appropriate vocabulary."
"They tell and interpret time using clocks and apply this in daily routines."
"They solve problems involving money, including combining amounts and giving change."
"They select appropriate tools and units to measure and solve practical problems."

Standard Measures & Practical Application (Band 8)	**Accuracy, Conversion & Problem Solving (Band 9)**	**Advanced Measurement & Calculation (Band 10)**
Pupils measure and compare using standard units and apply understanding to practical problems involving length, mass, capacity, time and money.	Pupils measure accurately using a range of standard units, interpret results and solve problems involving time, money and measurement.	Pupils apply measurement skills to more complex problems, including calculation, estimation and reasoning across different types of measure.
Key stage Target By the end of the key stage, the pupil will measure and compare using standard units	**Key stage Target** By the end of the key stage, the pupil will measure accurately using standard units and	**Key stage Target**

and solve practical problems involving everyday measures.	solve problems involving measurement, time and money.	By the end of the key stage, the pupil will solve problems involving measurement using calculation, estimation and reasoning.
Typical evidence might include: • measuring objects using rulers or scales • comparing length, weight or capacity • telling time to the hour or half past • recognising coins and notes • solving simple real-life measurement problems	**Typical evidence might include:** • measuring using different standard units (cm, m, g, kg, ml, l) • comparing measurements using symbols • telling time to five minutes • solving simple money problems • interpreting measurement results	**Typical evidence might include:** • measuring and comparing using different units • calculating with measures (adding and subtracting) • telling and estimating time accurately • solving problems involving money and change • applying measurement in multi-step problems
Mapped curriculum targets **Band 8** • I can compare, describe and solve practical problems for: lengths and heights (e.g. long/short, longer/shorter, tall/short, double/half), mass/weight (e.g. heavy/light, heavier, lighter), capacity and volume (e.g. full/empty, more/less, half, quarter). • I can measure and record using standard units. • I can tell time to the hour and half past. • I can use date-related language. • I can recognise coins and notes.	**Mapped curriculum targets** **Band 9** • I can measure using standard units (m/cm, kg/g, l/ml) and compare using >, < and =. • I can tell and write the time to five minutes, including quarter past and quarter to. • I can know the number of minutes in an hour and hours in a day. • I can solve simple money problems (e.g. combine amounts, finding different combinations.)	**Mapped curriculum targets** **Band 10** • I am starting to measure, compare, add and subtract measures. • I am starting to measure the perimeter of simple 2-D shapes. • I am starting to tell and write the time using analogue clocks (including Roman numerals and 12/24 hour time). • I am starting to estimate and read time to the nearest minute. • I am starting to compare durations and use units of time (seconds, minutes, hours). • I am starting to solve problems involving adding and subtracting money, including giving change.
