Celebration EHCP TARGET progression mapping

Patterns & Statistics Strand Overview

The pattern and statistics strand at Celebration level focuses on applying understanding of pattern to organise, represent and interpret data. Pupils move from recognising and describing patterns to representing information in structured ways, including charts and diagrams. They develop the ability to ask and answer questions about data, compare groups and solve problems using representations.

Why is it important?

Supports reasoning, problem solving and interpreting information across mathematics and real-life contexts.
Without this – pupils may struggle to organise information, recognise relationships or interpret data meaningfully.
With it – pupils can represent, analyse and interpret data to answer questions and solve problems.

Pathway Aim –

By the end of the pathway, pupils will be able to represent, organise and interpret data using appropriate methods and apply this understanding to solve problems and answer questions.

Example evidence statements –

"The pupil represents groups of data using objects, drawings or charts and explains what they show."
"They interpret simple data displays and answer questions about quantity and comparison."
"They construct and use pictograms or tables to organise information."
"They ask and answer questions such as 'how many more?' or 'how many fewer?' using data."
"They explain patterns and relationships within data sets."

Representing Data (Band 8)	**Structured Data Representation & Interpretati** (Band 9)	**Data Analysis & Problem Solving** (Band 10)
Pupils represent groups of information using objects, pictures and simple organisation methods, building on pattern and grouping skills.	Pupils represent and interpret data using structured methods such as charts and tables, and begin to ask and answer questions about data.	Pupils interpret and analyse data, using representations to solve problems and answer increasingly complex questions.
Key stage Target	**Key stage Target**	**Key stage Target**
By the end of the key stage, the pupil will represent and organise groups of information using objects, pictures and simple structures.	By the end of the key stage, the pupil will represent and interpret data using charts,	By the end of the key stage, the pupil will interpret and analyse data to solve problems and answer one-step and two-step questions.

	diagrams and tables and answer questions about the information.	
Typical evidence might include: • grouping objects and lining them up to represent quantities • using drawings or marks to represent groups • organising objects into clear groups for counting • describing simple patterns within grouped objects	**Typical evidence might include:** • constructing pictograms or simple charts • using tallies to record information • answering questions by counting data • comparing groups within a chart	**Typical evidence might include:** • interpreting charts and tables to answer questions • comparing quantities using data • solving problems involving differences between groups • using data to explain reasoning
Mapped curriculum targets **Band 8** • I can use a range of shapes, objects or numbers to create patterns and describe what I have made using mathematical language. • I can recognise and describe how a pattern repeats. • I can continue a repeating pattern and explain what I have done. • I can discuss how patterns are built and why certain elements are used. • I can represent groups using objects, marks, pictures. • I can organise groups in a clear way to help me represent data (e.g. lining up, grouping or sorting objects).	**Mapped curriculum targets** **Band 9** • I can interpret and construct pictograms, tally charts, block diagrams and tables. • I can ask and answer simple questions by counting the number of objects in each category and sorting the categories by quantity. • I can ask and answer questions about totalling and comparing categorical data. • I can use objects or pictures to help me answer questions about groups (e.g. using counters or drawings to represent data).	**Mapped curriculum targets** **Band 10** • I am starting to interpret and present data using charts, pictograms and tables. • I am starting to solve one-step and two-step questions (e.g. 'How many more?' and 'How many fewer?') using information presented in scaled charts, pictograms and tables
Next Step: Represent data using structured charts and diagrams	**Next Step:** Solve problems and interpret more complex data representations	**Next Step:** Apply data analysis skills across mathematics and real-life contexts
