Celebration EHCP TARGET progression mapping

Shape Strand Overview

The shape strand at Celebration level focuses on applying understanding of shape properties, classification and relationships in increasingly complex and abstract contexts. Pupils recognise, describe, compare and construct shapes, using mathematical language and reasoning to solve problems and explain their thinking.

Why is it important?

Supports construction and design, geometry and reasoning, and problem solving across mathematics.
Without this – pupils may struggle to recognise, classify and use shapes effectively in practical and abstract contexts.
With it – pupils can describe, compare and apply shape knowledge to solve problems and represent ideas.

Pathway Aim –

By the end of the pathway, pupils will be able to recognise, describe, classify and use shapes and their properties to solve problems across a range of mathematical and real-life contexts.

Example evidence statements –

"The pupil recognises and names a range of 2-D and 3-D shapes and describes their properties."
"They compare and sort shapes based on properties such as sides, faces and symmetry."
"They identify shapes within other shapes and explain what they see."
"They use shape properties to solve practical problems in construction or real-life contexts."
"They explain their reasoning when selecting or comparing shapes."

Shape Recognition & Properties (Band 8)	**Shape Classification & Relationships (Band 9)**	**Shape Construction & Geometric Reasoning (Band 10)**
Pupils recognise, name and describe common 2D and 3D shapes and begin to use their properties in practical contexts.	Pupils classify, compare and analyse shapes based on their properties and begin to understand relationships between shapes.	Pupils apply their understanding of shape properties to construct, draw and reason about shapes, including using geometric language and solving problems.
Key stage Target By the end of the key stage, the pupil will describe and represent spatial relationships	**Key stage Target**	**Key stage Target**

using drawings, models and mathematical language.	By the end of the key stage, the pupil will compare, sort and describe shapes based on their properties and relationships.	By the end of the key stage, the pupil will use knowledge of shape properties to construct, represent and solve problems involving shapes.
Typical evidence might include: • naming common 2D and 3D shapes • describing properties (sides, edges, faces, corners) • using shape knowledge in construction • identifying shapes in real-life contexts	**Typical evidence might include:** • sorting shapes using properties • comparing similarities and differences • identifying 2D shapes within 3D shapes • distinguishing between similar shapes	**Typical evidence might include:** • drawing 2D shapes accurately • constructing 3D shapes • recognising shapes in different orientations • applying shape knowledge to solve problems
Mapped curriculum targets **Band 8** • I can recognise and name common 2-D and 3-D shapes, including: rectangles (including squares), circles, triangles, cuboids (including cubes), pyramids and spheres. • I can describe properties (e.g. number of sides, edges, faces, corners). • I can use shape properties in construction (e.g. selecting equal-length blocks to make a rectangle).	**Mapped curriculum targets** **Band 9** • I can identify and describe the properties of 2-D shapes, including number of sides and line symmetry. • I can identify and describe the properties of 3-D shapes, including the number of edges, vertices and faces. • I can identify 2-D shapes on the surface of 3-D shapes (e.g. a circle on a cylinder). • I can compare and sort shapes and everyday objects. • I can discriminate between similar shapes (e.g. different triangles).	**Mapped curriculum targets** **Band 10** • I am starting to draw 2-D shapes. • I am starting to make 3-D shapes using modelling materials. • I am starting to recognise shapes in different orientations and describe them
Next Step: Compare, sort and classify shapes based on their properties	**Next Step:** Apply shape understanding to drawing, construction and problem solving	**Next Step:** Apply geometric reasoning across mathematics and real-life problem solving
